

## LuK Service Info

# Special tool set 400 0537 10

## For the correct installation of clutch and damper modules

Manufacturer: Audi

Models: A4, A5, A6, Q5

Transmission: 6-speed  
manual transmission  
7-speed  
direct shift transmission/S-tronic  
CVT transmission/Multitronic

Fig. 1: The front axle flange shaft runs between the drive plate and the DMF

The vehicle models listed above use transmissions where the differential is mounted in front of the clutch alongside the bell housing. In this configuration, the front axle flange driveshaft runs right through the area of the dual mass flywheel (DMF) and the respective clutch (Fig. 1). In order to create the required package space, clutch / DMF assemblies or damper modules with flange-mounted transmission plates (also known as drive plates) are used.

Replacing these modules correctly requires three tools:

1. Tool for the axial support of the damper module
2. Mounting handle
3. Tool for the radial support of the damper module

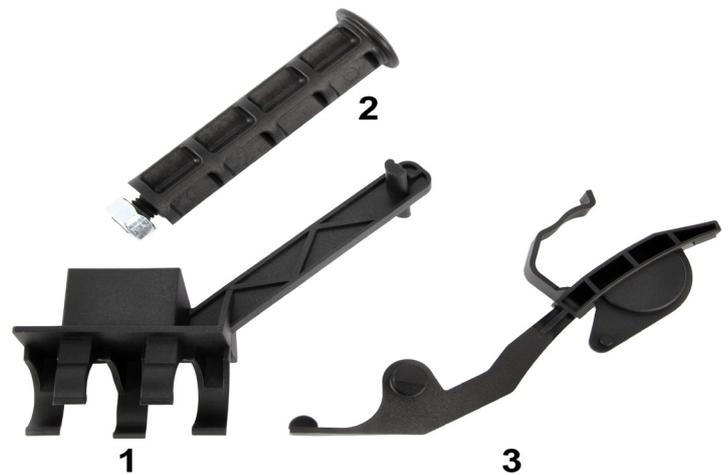

Fig. 2: Special tool set with Part No. 400 0537 10

The tool sets (Fig. 2) are available as a kit under Part No. 400 0537 10.

Handling instructions are provided with the damper modules. The brochure and the film "Repair solution for clutch modules" at [www.repxpert.com](http://www.repxpert.com) also show how to use the mounting tools when carrying out the repairs.

Please observe the vehicle manufacturer specifications!
